

CYRIL JIAN B. NARVASA

Full Stack Developer

+63 906 584 5902 | cyrilnarvasa589@gmail.com | github.com/Cyannimazing | portfolio-cyannimazing.vercel.app

PROFILE SUMMARY

Full stack developer with production experience delivering end-to-end modules on a multi-tenant B2B SaaS platform serving enterprise clients across Denmark. Owned 9+ features from database schema and REST API design to Nuxt 3 frontend, spanning social media integrations, password management, document workflows, and billing systems. Works independently across the full stack with a clean architecture approach and a consistent track record of shipping production-ready software.

WORK EXPERIENCE

Software Developer Intern

January 2026 - June 2026

Obiyen (awork.dk) | Remote, Denmark

Enterprise multi-tenant B2B SaaS built with Nuxt 3, Vue 3, Laravel 12, MySQL, and Pusher, serving multiple agencies per client through a custom tenancy architecture (Client / Agency) with role-based access control (Admin / Editor / Viewer) and real-time features via Laravel Echo and Pusher.

- Integrated Facebook and Instagram APIs via OAuth 2.0, delivering agency-scoped post management, comment moderation, brand mention tracking, and engagement analytics (reach, impressions, likes), enabling agencies to independently manage their social presence within the platform.
- Architected the Password Manager module from scratch, covering personal and company vaults, Azure Active Directory (Entra) directory sync, seat-based licensing, user assignment, master password, breach monitoring, and credential import/export (17 models, 28 migrations), enabling teams to centrally store, share, and manage credentials with Azure AD identity sync and seat-based access control across the platform.
- Built the Quotation module end-to-end covering full lifecycle (draft, sent, viewed, accepted / declined / expired), PDF and web rendering via Snappy, digital approval with audit log, template system, pricing engine, and automated email notifications, then resolved 11 post-QA issues (UTF-8 encoding, multi-currency, VAT inheritance, decimal precision, dynamic sender branding), delivering a production-ready quoting workflow to enterprise clients across Denmark.
- Delivered the Timesheet module with a 4-eyes approval workflow, then addressed post-launch feedback by introducing a Superadmin bypass for the 4-eyes principle and adding full EN/DA translation, enabling use across Denmark and the Philippines.
- Redesigned the SEO rank tracking pipeline to eliminate Google Search Console dependency by rerouting SERP data through SerpAPI and keyword volume through Google Ads API, enabling uninterrupted rank tracking for all agencies regardless of GSC connectivity.
- Enhanced DocFlow document management with multi-select bulk template operations and bulk positioning controls, resolved accessibility violations to achieve 100% WCAG compliance, meeting enterprise accessibility standards and unblocking client-facing deployment.
- Built per-department email configuration in the Helpdesk module, covering inbox aliases, SMTP/IMAP provider, HTML signature templates with dynamic variables, auto-reply templates, and keyword-based routing rules, enabling agents to send ticket replies directly to customers.
- Resolved multi-tenant data scoping and analytics payload bugs in the Survey module and a Microsoft Azure AD (Entra) OAuth SSO failure, restoring accurate per-agency reporting and re-enabling SSO for all Microsoft-authenticated users, with fixes validated via platform-wide QA across local and staging before each production release.

Full Stack Developer

April 2026 - Present

Cynergy (cynergy.cloud) | Solo, Self-initiated

Multi-app SaaS platform where businesses manage all their tools from one place. Each app is independently licensed, configured, and assigned to team members. Built solo using Nuxt 4, Vue 3, Laravel 12, following Repository, Service, and Interface design patterns.

- Architected a multi-app SaaS platform with seat-based licensing, email-based team invitations, and independent app configuration per company, with a dual-tier RBAC system: company-level licensing controls app access, while each app supports custom role creation with granular, module-specific permission toggles, enabling businesses to onboard teams and manage access across multiple apps from a single platform.
- Built the POS as the first platform app, supporting restaurants, retail, and repair service centers with transaction management (idempotency keys, refund/void/reversal flows), real-time updates via Laravel Reverb and Pusher, inventory batch tracking, a promo engine, and work order scheduling, enabling businesses to run end-to-end sales and service operations from one app.

EDUCATION

BS Information Technology

2022 - 2026

STI College Davao

Graduated Cum Laude | GWA: 1.39

TECHNICAL SKILLS

Frontend	HTML5, CSS3, JavaScript, TypeScript, Vue 3, Nuxt.js, React.js, Next.js, Tailwind CSS
Backend	Laravel 12 (PHP), Node.js, REST API, Queue/Jobs, Spatie RBAC, OAuth 2.0
Mobile	React Native Expo, Android Studio
Database	MySQL, PostgreSQL, SQLite, MongoDB
Integrations	Facebook Graph API, Instagram API, SerpAPI, Google Ads API, Google Search Console, Microsoft Azure AD
Tools	Git, GitHub, Figma, VS Code, Claude Code, Cursor, Agile/Scrum
