Full Stack Developer

+63 906 584 5902 | cyrilnarvasa589@gmail.com | github.com/Cyannimazing | portfolio-cyannimazing.vercel.app

PROFILE SUMMARY

Full stack developer with production experience delivering end-to-end modules on a multi-tenant B2B SaaS platform serving enterprise clients across Denmark, and current experience working across a portfolio of 90+ repositories spanning client business websites and internal company products. Comfortable owning features from database schema and REST API design through to frontend implementation, spanning social media integrations, password management, document workflows, billing systems, CMS platforms, and payment integrations. Works independently across the full stack with a clean architecture approach and a consistent track record of shipping production-ready software.

WORK EXPERIENCE

Full Stack Developer

June 2026 - Present

[Izee, Inc.](#) | Remote

Work across a portfolio of 90+ repositories, including client business websites and internal company products (Next.js, React, TypeScript, Supabase/PostgreSQL), built from a shared, reusable codebase. Own each project end-to-end, from admin CMS and business logic to page design, third-party integrations, and payments, enabling client businesses to manage their own content and operations without developer involvement for routine changes.

- Architected a reusable, injectable Next.js/React codebase used across a 90+ repository portfolio of client businesses and internal products, so new projects launch from a shared architecture instead of a one-off build each time.
- Developed a built-in admin CMS covering every page section, hero copy, service descriptions, pricing, testimonials, and team bios, giving business owners full self-service control over content with zero code changes, published live via incremental static regeneration.
- Integrated Stripe payments, the Meta Conversions API, and Google Reviews across e-commerce client sites (e.g. [viviour.com](#)), plus validated lead-capture forms (React Hook Form with Zod), routing every enquiry directly into each business's lead-management pipeline.
- Delivered [beautifulblessedesthetics.com](#) on Next.js 16 (App Router, React 19) with a Supabase (PostgreSQL) backend, securing data with Row-Level Security and serving imagery through a Backblaze B2 CDN for a fast, production-ready spa site.
- Owned full-stack delivery across client engagements, from database schema and backend business logic to page design, standardizing custom business logic on top of the shared platform for consistent delivery across projects.

Software Developer Intern

January 2026 - June 2026

[Obiyen \(awork.dk\)](#) | Remote, Denmark

Enterprise multi-tenant B2B SaaS built with Nuxt 3, Vue 3, Laravel 12, MySQL, and Pusher, serving multiple agencies per client through a custom tenancy architecture (Client / Agency) with role-based access control (Admin / Editor / Viewer) and real-time features via Laravel Echo and Pusher.

- Integrated Facebook and Instagram APIs via OAuth 2.0 and redesigned the SEO rank tracking pipeline around SerpAPI and Google Ads API, removing the Google Search Console dependency and keeping rank tracking uninterrupted for every agency.
- Architected the Password Manager module from scratch (17 models, 28 migrations), covering vaults, Azure AD (Entra) sync, seat-based licensing, and breach monitoring, giving teams centralized, audited credential management.
- Built the Quotation module end-to-end, from draft through accepted / declined / expired, PDF/web rendering, digital approval, and a pricing engine, then resolved 11 post-QA issues to ship a production-ready quoting workflow for enterprise clients across Denmark.
- Delivered the Timesheet module with a 4-eyes approval workflow and full EN/DA translation, brought DocFlow to full WCAG accessibility compliance, and built per-department Helpdesk email configuration, unblocking client-facing deployment across Denmark and the Philippines.
- Resolved multi-tenant data-scoping and analytics payload bugs in the Survey module and a Microsoft Azure AD (Entra) OAuth SSO failure, restoring accurate per-agency reporting and re-enabling SSO for all Microsoft-authenticated users, validated via platform-wide QA before each production release.

EDUCATION

BS Information Technology

2022 - 2026

[STI College Davao](#)

Graduated Cum Laude | GWA: 1.39

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, TypeScript, Vue 3, Nuxt.js, React.js, Next.js, Tailwind CSS

Backend: Laravel 12 (PHP), Node.js, REST API, Queue/Jobs, Spatie RBAC, OAuth 2.0

Mobile: React Native Expo, Android Studio

Database: MySQL, PostgreSQL, SQLite, MongoDB, Supabase

Integrations: Facebook Graph API, Instagram API, SerpAPI, Google Ads API, Google Search Console, Microsoft Azure AD, Stripe, Meta Conversions API, Google Reviews

Tools: Git, GitHub, Figma, VS Code, Claude Code, Cursor, Agile/Scrum
